

# Web Portal for Operator Agreements in Mobile Communications

Digital and automated process handling of operator agreements with operator-agreements.com

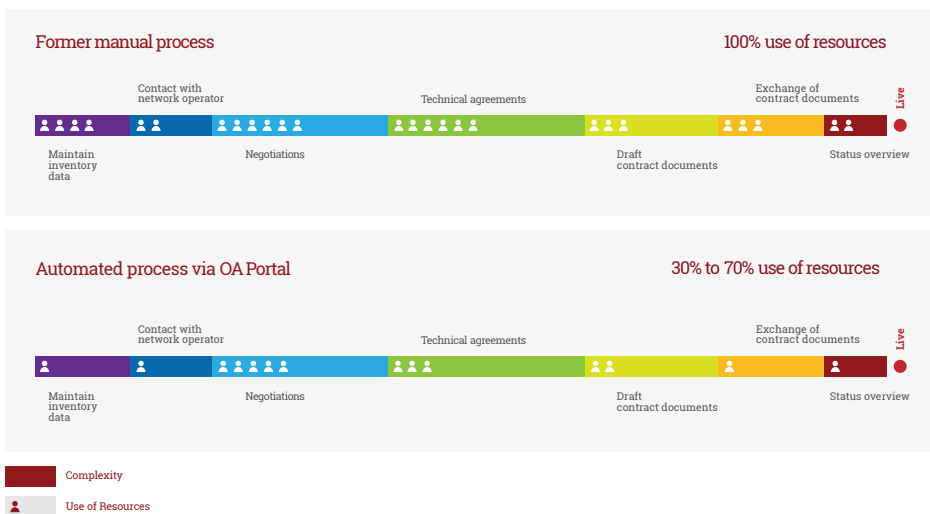

## Coordinate operator agreements more efficiently

The initiation of operator agreements between mobile network operators increases network quality near the border. Operator agreements provide planning security for mobile operators vis-à-vis the national regulatory authority.

The web portal "operator-agreements.com" structures and supports the contractual and technical coordination process.

This results in a significant boost in efficiency and resource savings compared to manual and distributed procedures.

## National

The digital representation in the web portal "operator-agreements.com" automates the German regulatory process of frequency management and implements the requirements of the national regulatory authority for the notification of operator agreements.

The web portal enables staged release processes to the regulator and transfers details of parameter settings.

## International

In an international context, the web portal supports mobile network operators from establishing contacts to document management up to data exchange. Templates are provided to speed up the drafting of contracts. It does not matter whether it is a bilateral or complex multilateral agreement.

The entire coordination process is documented transparently and summarized for status inquiries by means of management reporting.

### Reduction of effort compared to manual operator agreements

Less effort as a result of automated processes, especially for follow-up agreements

### Relevant contact person and master data always available

The maintenance of inventory data is simplified and the web portal allows easy research based on the data

### Mapping of the requirements of the national regulatory authority

Support for national spectrum coordination

### Standardization of the operator agreements processes

Integration of technical annexes with future DataExchange (parameters)

### Status transparency and process documentation

Central data instance - the process with all documents and contact persons visible at a glance

### Spectrum mask based on current regulatory information

Time savings compared to manual processing due to formalized and system-supported processes
